

The OECD/NEA and nuclear regulatory authorities from various countries visited Fukushima Daiichi Nuclear Power Station

The [OECD Nuclear Energy Agency](https://www.oecd-nea.org/)※1 (OECD/NEA) and nuclear regulatory authorities from various countries, including Canada, Finland, France, Spain, Switzerland and the United States (alphabetical order), visited Fukushima Daiichi Nuclear Power Station to observe the current situation of the NPS on November 27, 2022. The international visitors took a close look at the ongoing decommissioning work from the high ground overlooking Units 1-4. They also went inside Unit 4 to see the internal conditions there. They were also shown around [the ALPS related facilities](https://www.tepco.co.jp/en/hd/decommission/index-e.html)※2 and 3, including the ALPS, K4 tanks and the discharge vertical shaft. They also visited [the waste materials related facilities](https://www.tepco.co.jp/en/decommission/progress/watertreatment/index-e.html)※2 including the large waste storage facility.

TEPCO will continue to move steadily forward with the long-term decommissioning process based on international safety standards and scientific evidence.
